

PETRA

Albacete

Designed exclusively for Arcos -the leading cutlery company in Spain-, Petra consolidates the brand's commitment to innovative design. This knife sheath is a timeless piece resulting from the combination of two natural materials; elemental forms seamlessly connected. Stone and wood come together to create a set designed to protect and display the knives in our homes, with a blend of simplicity and delicacy. While the stone base -tectonic, heavy, and hard- provides support and stability to the ensemble, the wood -more subtle, light, and gentle- is what comes into contact with the hand and shields us from the cutting blades. The knife's protection (a central aspect of the piece) is entrusted to the sheaths. Meanwhile, the stone base supports and organizes them to create a smoother and more pleasant transition between the sheaths and the workbenches.
